

HPCNow! joins the celebrations of 11 February - International Day of Women and Girls in Science

- Our HPC experts will bring the advances in this field closer to the younger audience and highlight the role of women scientists who work or have worked in the area.

Barcelona, January 31st 2023 - At HPCNow! we are quite aware of the importance of giving visibility to women who work in the HPC - High Performance Computing sector, our field of expertise. This is the reason why this year, aligned with the celebration of 11 February, the International Day of Women and Girls in Science 2023, we have organized several outreach talks in educational centers in Barcelona and Badalona, where our HPC experts: María José Benítez, Elisabeth Ortega and Erica Bianco will bring the advances in this field closer to the younger audience and highlight the role of women scientists who work or have worked in the area.

About HPCNow!

The use of supercomputing as a tool for solving problems in a wide variety of fields has grown exponentially in recent years. From its beginnings in the 80's and 90's, when the owners of the first supercomputers were mainly public entities such as universities, research centres, or the military, their use in the private sector has grown significantly. Thus, HPC has become a highly valuable, even indispensable tool in many important companies in industries such as defence, pharmaceutical, chemical, automotive, and/or aerospace.

This is the context in which HPCNow! was founded by three partners with wide experience in the management of high-performance computers and a thorough background in the use of scientific HPC codes. The company offers its expertise and knowledge with the aim of helping its customers to get the most out of HPC technologies by providing simple and efficient supercomputer usage.

Providing careful and detailed solutions and the successful customer response to our services has allowed HPCNow! to grow without external funding and to have the means to tackle any new challenge.
